

## **IQS Newsroom Featured Profile: TMF Corporation**

by Breana Cronk, IQS Editor

In 1988 Tom Fitzgerald set out to build a company with just one product to sell and one customer to sell it to. That company, now doing business as the [TMF Corporation](#), has since grown to supply the pharmaceutical, waste management and food processing industries with a full range of durable, high quality plastic pallets and other containers. Such growth can be attributed not only to the increasing realization of the many benefits afforded by plastic pallets, but to the skill and willingness of the company to recognize and apply these benefits. The attentive staff at TMF has the ability to discern what is needed in every industry they serve, optimizing container use and application. The company proves this aptitude time and time again using their expertise to make clients more productive and the cost of business more palatable.

The benefits of plastic pallets, much like the advantages of getting them from TMF Corporation are numerous. As compared to alternative containment and transport materials such as wood or metal, plastic offers a sanitary, safe, rugged and lightweight design that can easily be made to suit virtually any application. If existing options fail to meet required specifications, the brilliant TMF staff offers part design and engineering as well as custom pallets with features such as hot-stamping, color choices, intermittent lip and more. TMF will find the right product whether it be light weight shipping pallets of delicious baked goods or drum pallets able to handle 55 gallon drums containing benevolent or even hazardous materials. The TMF PROTECH® line in particular offers unparalleled quality, efficiency and cost effectiveness.

At TMF there is a keen awareness that cost is measured not only in dollars and cents, but in the overall impact a product has on the industry and the environment. Luckily, their operations enable both to be lessened as their resilient product offerings are a more reusable and recyclable alternative to wooden pallets that remain in line with the company's pension for competitive pricing. As science and industry advance, TMF Corporation looks forward to innovative new materials and the possibility to provide customers with lighter, stronger and less expensive plastic container and pallet options as the company and the industry grow. Started with just one product and one customer, TMF Corporation continues to expand both product offerings and customer base through continuously impeccable customer service and perpetually perfected plastic pallets.
